

Week 12

HTML 5

Generic DIV Is a tag used to group multiple elements together such as <p> <h1>

EX: ALL ELEMENTS ARE GROUPED BELOW

```
<div id= "container">  
<header> </header>  
<h1> </h1>  
<nav></nav>  
</div>
```

<Nav> (primary navigation element)

<section> Used to create sections of content starting with an <h1>

<article> A self contained element within the section

<aside> able to position extra content away from primary content

Flex Box

A powerful HTML/CSS tool for creating intricate and diverse lay out structures within your code with the ability to automatically align content by size and importance given in code.

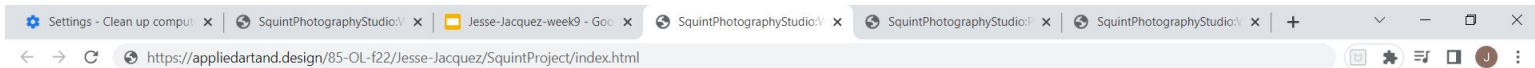

```
ColumnLayout {  
  Max-width 1000px;  
  background-color:#FFF  
  Margin: 40px auto 0 auto;  
  Line-height 1.65;  
  Padding: 20px 50px  
  Display: Flex;  
}
```

```
columnOne{  
  Flex: 3;           (give Width for column)  
  Order: 1;          (gives order priority)  
}
```

```
ColumnTwo{  
  Flex 1;  
  order : 2;  
}
```

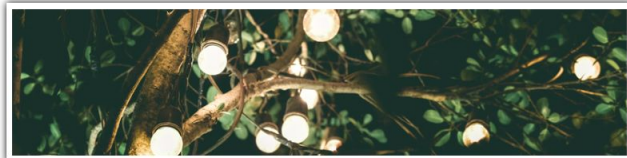

```
ColumnThree{  
  Flex: 1;
